

Is your child troubled by depression?

If your child is between the ages of 7 and 17, is affected by depression* and still experiencing its symptoms – you may be interested in the Kites clinical research study.

Kites, an ADVANCE study, is a clinical research study that will evaluate the effectiveness of an investigational drug for depression in children and young people.

To find out more, please contact the study team below, or talk to your doctor.

*The Kites study is focused on major depressive disorder (MDD), also known as major depression, a form of depression with severe symptoms that interfere with a person's ability to work, sleep, study, eat and enjoy life.
